Problem $\mathcal{X}$: Alex needs a bag for a rainy hiking trip. The bag should keep clothes dry, be easy to carry for several hours, and fit a water bottle. The options are a **paper shopping bag**, a **waterproof backpack** with side pockets, and a **small suitcase**. Which option is best, and why?

 +  → ? ? ? 

① The bag must work for a rainy hiking trip, so it needs to protect clothes from water and be comfortable to carry.

 +  →  + 

② A **paper shopping bag** is light, but rain can damage it and wet the clothes inside.

? →  → 

③ A **small suitcase** can hold clothes, but it is awkward to carry for several hours on a hike.

? →  → 

④ A **waterproof backpack** protects clothes from rain and is designed to be carried while walking.

? →  + 

⑤ Its side pockets can also hold a water bottle, so it satisfies the remaining requirement.

? → 

⑥ Therefore, the waterproof backpack with side pockets is the best choice.
