Problem $\mathcal{X}$: Tom wanted to enter his apartment, but he realized he had left his keys on his desk at work. What is the most likely problem? *A. He forgot his lunch. B. He cannot unlock the apartment door. C. He needs to buy new shoes. D. He is already inside the apartment.*

① Tom wants to enter his apartment, so the relevant issue is access to the door.

② Since his keys are at work, he likely cannot unlock the apartment door.

③ The other options are unrelated to entering an apartment.

④ Therefore, the answer is B: he cannot unlock the apartment door.
