Problem $\mathcal{X}$: Facts and rules: Dana is a student. Dana has a valid library card. Anyone who is a student and has a valid library card can **borrow books**. Anyone who can borrow books and has no overdue books can **reserve study rooms**. Dana has no overdue books. Anyone who is a visitor can read magazines in the lobby.

Question: Can Dana **reserve study rooms**?

$\text{EQ} \rightarrow \{ \text{grad cap}, \text{book}, \text{clock}, \text{person}, \text{@} \} \rightarrow \text{checkmark} ?$

① Dana is a student and has a valid library card.

② The borrowing rule requires both being a student and having a valid library card.

③ Since Dana satisfies both conditions, Dana can borrow books.

④ Dana also has no overdue books, which is needed for reserving study rooms.

⑤ Because Dana can borrow books and has no overdue books, Dana can reserve study rooms.

⑥ The visitor rule is irrelevant, so the answer is yes.
